Project Overview

Tell us a little about your project. What are the main objectives of the project, and who will benefit from it?

This project will scale and expand a highly successful fresh water filtration project in Luque, Paraguay to other regions of Paraguay. The initial project fountains were delivered with accompanying education to students and teachers in Luque, Paraguay via the Rotary community project that is now readily repeatable and scalable. The initial project resulted from a community request from a local school director (Principal) due to the need to provide fresh and filtered, cold water to students in the summer months of extreme Paraguayan heat without AC, air conditioning. The school day temperatures are consistently reaching 100+ degrees fahrenheit and the age range of children these schools starts at 5 years of age. The Host club advised that through conversations with school directors in Luque, student attendance was low in the summer months due to not having cool and potable drinking water due to access in the schools and inability to afford bottled water. The initial cool and filtered water fountain project completed in 2018 in the Paraguay public school No. 859, Heroes de la Patria, followed by a trip to Paraguay by Vinings Cumberland Rotarians to see the fountain and meet Luque, Paraguay Club Rotarians.

A second school was identified in 2019, however due to the pandemic the project was paused. In 2022 the project resumed and Luque, Paraguay Rotary in partnership with Vinings Cumberland Rotary delivered a second project and the plan is to now scale this repeatable project to more schools and

regions in Paraguay. The Vinings Cumberland Rotary Club has been invited by our Rotarians in Paraguay to visit in summer of 2024 by which time we hope to have reached additional schools with this cool, fresh water, AGUA FRESCA!

Rotary Luque in Paraguay and Rotary Vinings Cumberland now plan to expand to additional schools in the region over a 1 year period and estimate the cost at \$30,000 which consists of 13 schools (14 fountains). Each school's requesting letter and need is documented in the 'Supporting Documents' section of this global grant. This project is seen as having potential to expand even further in South America based on the results of this Global Grant project focused in Paraguay. Another benefit is that Rotary Luque has a very strong Rotoract program and Rotary Vinings Cumberland has a very strong Interact program at Campbell High School in Smyrna, GA. As an additional benefit, we plan to share frequent status with both the Rotoract and Interact clubs in this project to further strengthen cultural and service awareness

The Rotary club of Luque committee members, Samuel Bramante, Emiliana Cáceres Rojas and Fany Benitez de Giangreco along with Arundhati Bhowmick have met with the schools and Directors. The list of schools is attached this grant.

Project planning

Describe the community needs that your project will address.

The objective of the project is to guarantee access to cool, affordable and filtered potable drinking water to students at their schools in communities lacking these necessities to provide a higher quality environment for their education.

The students will have access to fresh water during the year and especially in the very hot season. It should be noted that most students come from vulnerable social territories located on the periphery of the institutions and the only drinking fountain that the institutions have are precarious and supply water with high temperatures.

How did your project team identify these needs?

During Rotary Club volunteer projects at a local school, the school director presented the problem and asked if the club would be able to assist with a solution. In discussing with other educators it was found that the problem was pervasive and warranted a broader reaching

solution for schools. Other schools subsequently solicited Rotary Club of Luque for assistance.

How were members of the benefiting community involved in finding solutions?

By coordinating with the Rotary Club of Luque to plan the logistics of providing education along with the fountains and constructing them on-site.

How were community members involved in planning the project?

The school staff met with representatives of the Rotary Club of Luque to review plans and provide access to the schools. Pictures of one of the meetings are included in the overview document attached this global grant in the 'Supporting Documents' section.

Project implementation**Summarize each step of your project's implementation.**

Do not include sensitive personal data, such as government ID numbers, religion, race, health information, etc. If you include personal data, you are responsible for informing those whose personal data is included that you are providing it to Rotary and that it will be processed in accordance with Rotary's [Privacy Policy](#).

4	Build fountain support to required specifications	42 Days
5	Fit and install the ceramic tiles for the fountain	28 Days
6	Deliver thermal reservoir to chill water	14 Days
7	Build support for refrigeration unit and water reservoir	14 Days
8	Install Motor for refrigeration with filter, condenser and fan	28 Days
9	Install copper tubing and solder fittings	14 Days
10	Install electrical thermostat for water temperature	14 Days

12	Test fountains	14 Days
13	Reserved day for any modifications following test day	14 Days
14	Review fountain with school staff, explain functionality, maintenance and answer questions	14 Days

Will you work in coordination with any related initiatives in the community?

No

Please explain. Are local initiatives not addressing these needs? Or, if they are, why did you decide not to work with them?

Local initiatives are not addressing these needs. This project is targeted to the requesting school where the fountain will be installed and this program is unique to the Rotary Club of Luque. The site preparation and installation will be the only elements requested or needed in the community by the Rotary Club of Luque to complete the fountains.

Please describe the training, community outreach, or educational programs this project will include.

Education for water conservation to the students and staff as well as training of operating the thermostat for water refrigeration and filtration units.

How were these needs identified?

The Principals of the schools brought the need to the attention of the Rotary Club of Luque and the club worked to address the needs for fresh and cool drinking water while including water conservation education as part of the plan.

What incentives (for example, monetary compensation, awards, certification, or publicity), will you use, if any, to encourage community members to participate in the project?

Providing the fountains to the schools is the incentive. Several schools have made the request to receive the fountains to date.

List any community members or community groups that will oversee the continuation of the project after grant-funded activities conclude.

The school administration will oversee the fountain maintenance on-going. On-going upkeep and maintenance is their commitment with oversight from the Rotary Club of Luque.

Budget

Will you purchase budget items from local vendors?

Yes

Explain the process you used to select vendors.

Rotary Club of Luque compared across various different vendors in the community and ensured that they utilize registered legal invoicing/receipts based on accounting practices required by the government of Paraguay.

Did you use competitive bidding to select vendors?

Yes

Please provide an operations and maintenance plan for the equipment or materials you anticipate purchasing for this project. This plan should include who will operate and maintain the equipment and how they will be trained.

Only the motor for the refrigeration unit and associated electronic thermostat would require possible repairs in the future. They are common parts and the accompanying labor can found throughout the country of Paraguay. The schools will commit to maintaining any repairs as part of the application process in order to be a potential candidate for receiving the fountain.

Describe how community members will maintain the equipment after grant-funded activities conclude. Will replacement parts be available?

The project uses generally accepted parts and labor found throughout the country of Paraguay and the schools will commit to maintaining any repairs as part of the application process in order to be a potential candidate for receiving the fountain.

If the grant will be used to purchase any equipment, will the equipment be culturally appropriate and conform to the community's technology standards?

Yes

Please explain.

All equipment and materials are sourced within Paraguay and with standards used throughout the country.

After the project is completed, who will own the items purchased by grant funds? No items may be owned by a Rotary district, club, or member.

The local schools where the fountains are installed will own the items purchased.

Funding**Does your project involve microcredit activities?**

n/a

Have you found a local funding source to sustain project outcomes for the long term?

Yes

Please describe this funding source.

Each school will provide on-going maintenance of their fountains.

Will any part of the project generate income for ongoing project funding? If yes, please explain.

No.
